OBJECTIVES OF THE CONSENSUS CONFERENCE

Group B Streptococcus is estimated to colonize 10% to 20% of pregnant women. Infection with GBS is considered an important public health issue, since it is associated with neonatal sepsis, death, chorioamnionitis, perinatal infection and preterm labour. The majority of infections are associated with intrapartum transmission of the microorganisms and therefore since a few years, several societies following the CDC recommendations have applied the strategy of GBS universal screening of pregnant women in the last month of pregnancy associated with the use of prophylactic antibiotics during labour. Although this strategy has led to a significant reduction in early onset neonatal GBS disease, there is, as a counterpart, an abuse of antibiotics during intrapartum, an increase risk of antimicrobial resistance and an increased number of unwanted side effects of antibiotics. Moreover, different sampling techniques and different culture methods for the GBS carriage in pregnant women may bring to an increase in the number of false positive and false negative results, taking also into consideration that the microbiological test performed far from labour does not accurately predict the GBS colonization of the genital tract, because GBS may be transient or intermittent and re-colonization can occur after the time of screening. Moreover, almost three quarters of full term infants with early onset disease is born to mothers screened antenatally and found culture-negative. Furthermore, some important societies like RCOG have recently published new guidelines which do not support anymore the prepartum screening. Therefore, actually there is a need to reach a consensus to try to overcome all these limitations and to homogenize the current practices and strategies in the European countries, in order to detect quickly and accurately the real GBS status at the time of labour, giving antibiotics only to whom really is worth.

FACULTY

Nandor Acs, Budapest, Hungary
Dilly O.C. Anumba, Sheffield, UK
José Luis Bartha, Madrid, Spain
Sophia Brismar Wendel, Stockholm, Sweden
Roland Devlieger, Louvain, Belgium
Gian Carlo Di Renzo, Perugia, Italy
Bettina Hollwitz, Hamburg, Germany
Najoua El-Helali, Paris, France
Ilenia Mappa, Rome, Italy
Cécile Meex, Liege, Belgium
Giuseppe Rizzo, Rome, Italy
Daniel Surbek, Basle, Switzerland
Miroslaw Wielgos, Varsaw, Poland

OCTOBER 30th 2026

THE ARTISTS' PALACE FLORENCE, ITALY

EUROPEAN CONSENSUS CONFERENCE ON

"STRATEGIES FOR GBS SCREENING IN THE LABOR WARD"

Chairperson:
JOSÉ LUIS BARTHA, MADRID, SPAIN

PREIS School Director:
GIAN CARLO DI RENZO, PERUGIA, ITALY

PREIS SCHOOL
THE INTERNATIONAL SCHOOL ON WOMEN'S AND NEWBORN'S HEALTH

EUROPEAN CONSENSUS CONFERENCE ON

"STRATEGIES FOR GBS SCREENING IN THE LABOR WARD"

OCTOBER 30th, 2026

THE ARTISTS' PALACE - FLORENCE, ITALY

8.40-8.50 am	Welcome at the PREIS School *Gian Carlo Di Renzo*
8.50-9.00 am	Objectives of the workshop *José Luis Bartha*
9.00-9.10 am	Presentation of the sponsor (Cepheid) *Christophe Martinaud*
	9.10 am - 12.30 pm 1st SESSION
9.10-10.30 am	The current situation of GBS screening in Europe *Najoua El-Helali*
	The outline of the bedside rapid PCR test: evidence update and implementation *José Luis Bartha*
	Q&A
10.30-11.00 am	*Coffee Break*
11.00-12.30 pm	General discussion and strategies: the gap between current GBS testing practices in Europe and the previous consensus. Presentation from countries experiences, barriers, guidelines *All Faculty*
12.30-1.30 pm	*Lunch break*
	1.30 pm - 4.30 pm 2nd SESSION
1.30-2.30 pm	How to introduce the bedside test in the labour ward. Discussion on the consensus draft manuscript *José Luis Bartha*
2.30-3.30 pm	Q&A and discussion
3.30-4.30 pm	Consensus agreement and publication policies
4.30 pm	End of the meeting
